

## CLAIMS

What is claimed is:

- 5 1. A method for producing a pharmaceutical preparation of pressure-fused particles comprising an active pharmaceutical ingredient, the method comprising:
  - (a) providing a sample comprising said active pharmaceutical ingredient in crystalline or amorphous form;
  - (b) subjecting said sample to high pressure compaction at a pressure of
  - 10 between 0.1 GPa and 10 GPa to produce a compacted sample; and
  - (c) isolating pressure-fused particles from said compacted sample.
2. The method of claim 1, wherein said pressure is between 0.5 GPa and 7.5 GPa.
- 15 3. The method of claim 1, wherein said pressure is between 1 GPa and 5 GPa.
4. The pharmaceutical preparation of claim 1, wherein said produce pressure-fused microparticles have a density of between  $1 \text{ g/cm}^3$  and  $40 \text{ g/cm}^3$ .
- 20 5. The pharmaceutical preparation of claim 1, wherein said produce pressure-fused microparticles have a density of between between  $2 \text{ g/cm}^3$  and  $20 \text{ g/cm}^3$ .
6. The pharmaceutical preparation of claim 1, wherein said produce pressure-fused microparticles have a density of between between  $4 \text{ g/cm}^3$  and  $10 \text{ g/cm}^3$ .
- 25 7. The method of claim 1, wherein said compacted sample has a thickness of between  $25 \text{ }\mu\text{m}$  and  $400 \text{ }\mu\text{m}$ .
8. The method of claim 1, wherein said compacted sample has a thickness of
- 30 between  $50 \text{ }\mu\text{m}$  and  $200 \text{ }\mu\text{m}$ :

9. The method of claim 1, wherein said compacted sample has a thickness of between 100  $\mu\text{m}$  and 150  $\mu\text{m}$ .
10. The method of claim 1, wherein said pressure is maintained for a period of  
5 between 30 sec. and 10 min.
11. The method of claim 1, wherein said pressure is maintained for a period of between 60 sec. and 5 min.
- 10 12. The method of claim 1, wherein said pressure is maintained for a period of between 90 sec. and 3 min.
13. The method of claim 1, wherein said pressure-fused particles have a maximum dimension between 20  $\mu\text{m}$  and 800  $\mu\text{m}$ .
- 15 14. The method of claim 1, wherein said pressure-fused particles have a maximum dimension between 40  $\mu\text{m}$  and 400  $\mu\text{m}$ .
- 15 15. The method of claim 1, wherein said pressure-fused particles have a maximum  
20 dimension between 100  $\mu\text{m}$  and 250  $\mu\text{m}$ .
16. The method of claim 1, wherein the step of isolating said pressure-fused particles from said compacted sample comprises sieving said compacted sample through a sieve with an exclusion limit of between 20  $\mu\text{m}$  and 800  $\mu\text{m}$ .
- 25 17. The method of claim 1, wherein the step of isolating said pressure-fused particles from said compacted sample comprises sieving said compacted sample through a sieve with an exclusion limit of between 40  $\mu\text{m}$  and 400  $\mu\text{m}$ .

18. The method of claim 1, wherein the step of isolating said pressure-fused particles from said compacted sample comprises sieving said compacted sample through a sieve with an exclusion limit of between 100  $\mu\text{m}$  and 250  $\mu\text{m}$ .
- 5 19. The method of claim 1, wherein said sample comprises micronized particles comprising said active pharmaceutical ingredient.
20. A pharmaceutical preparation of pressure-fused particles comprising an active pharmaceutical ingredient, the pressure-fused particles comprising:
- 10 an active pharmaceutical ingredient subjected to high pressure compaction at a pressure of between 0.1 GPa and 10 GPa.
21. The pharmaceutical preparation of claim 20, wherein said pressure is between 0.5 GPa and 7.5 GPa.
- 15 22. The pharmaceutical preparation of claim 20, wherein said pressure is between 1 GPa and 5 GPa.
23. The pharmaceutical preparation of claim 20, wherein said produce pressure-
- 20 fused microparticles have a density of between 1  $\text{g/cm}^3$  and 40  $\text{g/cm}^3$ .
24. The pharmaceutical preparation of claim 20, wherein said produce pressure-fused microparticles have a density of between between 2  $\text{g/cm}^3$  and 20  $\text{g/cm}^3$ .
- 25 25. The pharmaceutical preparation of claim 20, wherein said produce pressure-fused microparticles have a density of between between 4  $\text{g/cm}^3$  and 10  $\text{g/cm}^3$ .
26. The pharmaceutical preparation of claim 20, wherein said pressure-fused particles have a maximum dimension between 20  $\mu\text{m}$  and 800  $\mu\text{m}$ .
- 30

27. The pharmaceutical preparation of claim 20, wherein said pressure-fused particles have a maximum dimension between 40  $\mu\text{m}$  and 400  $\mu\text{m}$ .

28. The pharmaceutical preparation of claim 20, wherein said pressure-fused  
5 particles have a maximum dimension between 100  $\mu\text{m}$  and 250  $\mu\text{m}$ .
